Kyiv National Economic University

`10–`11, Master's degree.

Banking

Languages

English – Intermediate

Ukrainian – Native

Summary

As a developer and SEO specialist, I have experience in creating web products (WordPress sites), including their optimization for search engines, SEO promotion, and advertising in Google.

Currently, I am expanding my skills in developing React applications, mastering Next.js, TypeScript, Firebase, and WebSockets. My primary focus is on the user interface aspect of web applications, but I am ready to expand my technology set according to employer requirements, including potentially learning back-end development if necessary.

In my work, I focus on concrete results. I am convinced that uniting collective efforts to achieve team tasks and company goals is paramount and becomes the key to success only if each team member realizes their own professional interests in their work. Therefore, I aspire to be part of a team where every member is committed to continuously improving their knowledge and skills in a competitive, yet friendly atmosphere.

If you're looking for a responsible specialist who can help realize your project and become a reliable member of your development team, I am ready to assist!

Skills

Web application development; UI components development; Technical and non-technical communication

Technologies

Frameworks & libraries

ReactJS; Redux & Redux Toolkit; Material UI

Core technologies & concepts

JavaScript (ES5+); Typescript; HTML; CSS; Browser API; REST API; MongoDB

Agile/Scrum

Tools

VS Code; ESLint; Git; Trello

Job experience

Alite Recruiting

Nov '23 – Now: React Developer

I am developing a simple CRM system with basic functionality:

- Adding platform users (managers and administrators);
- Adding and editing client data;
- Storing and analyzing information.

I use **ReactJS**, **Redux Toolkit**, **Material UI**, and **react-router** for the frontend, with **MongoDB** for data storage and **Firebase** for deployment. To conclude, I plan to create a real-time communication chat using socket.io, which will be a collaborative effort with another junior developer.

Soroka, advertising agency

Jul '21 – Nov '23: Web Developer, SEO specialist

Working with agency clients, I've been involved in:

- Developing business card websites (**WordPress**);
- Filling websites with content and **SEO optimization** of content, **SEO promotion** in Google;
- Contextual advertising (**Google Ads**).

The agency has allowed me to realize myself as a specialist capable of creating a web product optimized according to SEO requirements. Among my achievements are bringing clients into the top 10 Google rankings for key queries.

Projects

CRM

Application URL: <https://crm-portfolio-project.web.app/>

A copy of a commercial project that I continue to work on. The task is to create an application (CRM) with basic functionality for the client.

Technologies used: **React**, **Redux Toolkit**, **Material UI**, and **react-router** for the frontend, with **MongoDB** for data storage and **Firebase** for deployment.

The application's functionality is growing.

Victory Donation

Application URL: <https://donate-for-victory.web.app/>

A web application in support of the Armed Forces of Ukraine. Final project at [DAN.IT](#), a Ukrainian EdTech center.

Served as Team Lead in a team of 5 members, developed application components. Technologies: **React**, **Redux**, **react-router**, data storage – **MongoDB**, deployment – **Vercel**.

Currently, I am continuing to refine the application to improve my development skills.
